

ClariFix cryotherapy is **clinically proven**

Key findings from prospective, multicenter studies of adult patients with allergic and non-allergic chronic rhinitis^{11,12}

Decrease in rhinorrhea and congestion

Statistically significant compared to baseline ($p < 0.001$)^{11,12}

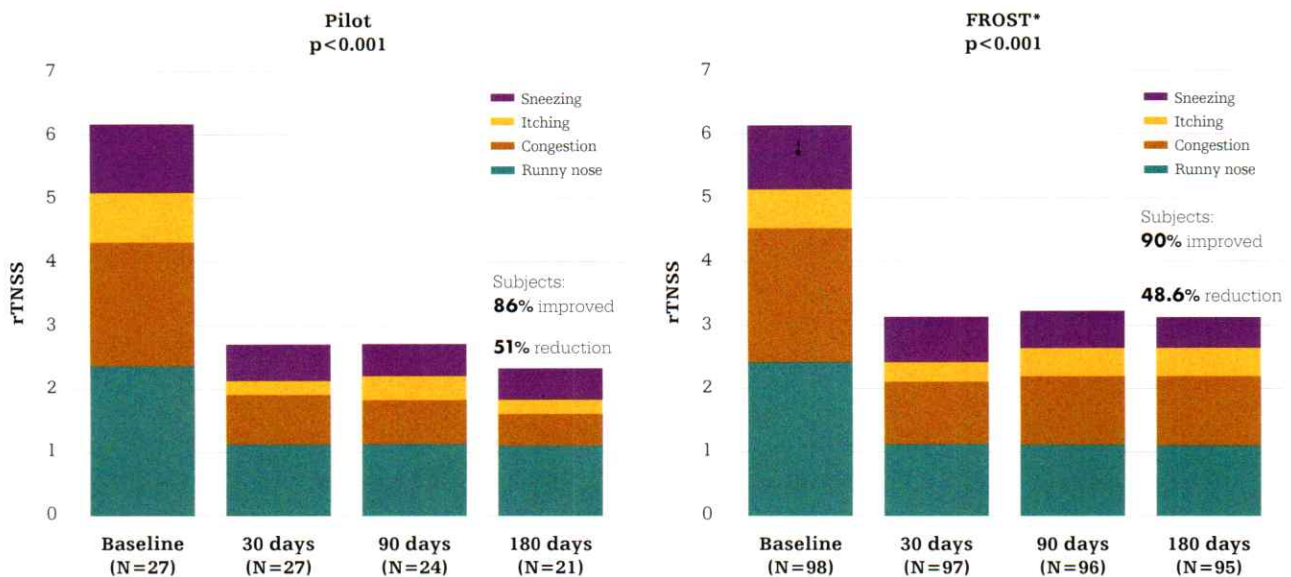

Improved TNSS

Shows significant improvement in rhinitis symptoms through 180 days for both allergic and non-allergic rhinitis patients ($p < 0.001$)^{12,13}

Durable

4 out of 5 patients reported long-lasting improvement¹²

Mean total nasal symptom score (TNSS)^{12,13}
TNSS scale = 0-12; 4 symptom (0-3 scale) additive score

In both studies there was no occurrence of device related serious adverse events, and one procedure related (non-cryo) serious adverse event.
*FROST study is ongoing.

Who is ClariFix cryotherapy for?

- Adult patients experiencing moderate to severe chronic runny nose and/or post nasal drip, clearing of the throat
- Allergic or mixture of allergic and non-allergic chronic rhinitis
- Non-allergic chronic rhinitis (vasomotor)
- Patients who are unhappy with symptom relief from medical management

ClariFix cryotherapy device

Chronic rhinitis is a problem

24M+

24+ million Americans suffer from chronic rhinitis¹

Many are unsatisfied with medical therapy

2.5M

2.5 million are resistant to medical therapy²

Pharmacological interventions only manage symptoms

>40%

>40% of patients experience uncontrolled chronic rhinitis after FESS³

Surgical neurectomy can be too invasive

ClariFix cryotherapy is a **real solution**

Low risk

Low risk treatment under injected or topical local anesthesia

Efficient

Efficient procedure for in-office or surgical setting

Safe

Utilizes cryotherapy with well-established safety profile⁴⁻¹⁰
